#### 1. Specifications and Dimensions

MODEL	DCS-1	
	DCS-1E	DCS-1G
DIMENSION	STANDARD TYPE	STANDARD TYPE
DIMENSION	2,000(L)×700(W)×1600(H)mm	2,000(L)×700(W)×1600(H)mm
TYPE	ELECTRICAL TYPE	STEAM TYPE

1. METERIALS : STS-304 1.0T, 1.2T, 1.5T 2.0T

2. ELECTRICAL SPECIFICATIONS: 380V, 3Ph, 4 wired

3. ELECTRIC CONSUMPTION: 38kW

4. WASH PUMP: 1.5kW(380V, 3Ph, 4wired, 500 liter/min)

5. WASH TANK CAPACITY: 80 Liters

6. WASH TEMPERATURE: 60°C~70°C

7. HEATING ELEMENT FOR WASH TANK: 4Kw [Immersion type]

8. WASH TYPE: CLOSE POWERFUL SPRAY

9. DRY TYPE: HOT WIND BY RING BLOWER [HEATER, 3kW & BLOWER, 2.25kW]

10. BOOSTER: N/A

11. WATER CONSUMPTION: WASH WATER 80 Liters RINSE WATER - 6 L/MIN

12. HEAT QUANTITY FOR WASH TANK: 4,400Kcal/h

13. HEAT QUANTITY FOR RINSE: LNG-36,000Kcal/h, LPG-3KG/h

14. CONVEYOR SPEED: 0-10M/min (SPEED CONTROL MOTOR: 180W, SPEED CONTROL AVAILABLE)

15. CONVEYOR PITCH AND CHAIN WIDTH: 355.6MM/PITCH. CHAIN WIDTH: 500MM

16. NOZZLE: UP/DOWN SPRAY NOZZLE, EASY TO CLEAN SCREW TYPE

17 SAFETY DEVICE: OVERLOAD RELAY, EMERGENCY SWITCH AT INLET AND OUTLET

18. WASH CAPACITY: CATERING FOOD TRAY 400-500 EA/h [CONVEYOR SPEED AT 3.0M/MIN] 170-180 RACKS [500 BY 500MM]/h [CONVEYOR SPEED AT 1.5M/MIN]

19. OTHER SPECIFICATIONS:

WATERING CONN.-PRESSURE: 1.2Kg/cm<sup>2</sup>

PIPE: 15A OVER

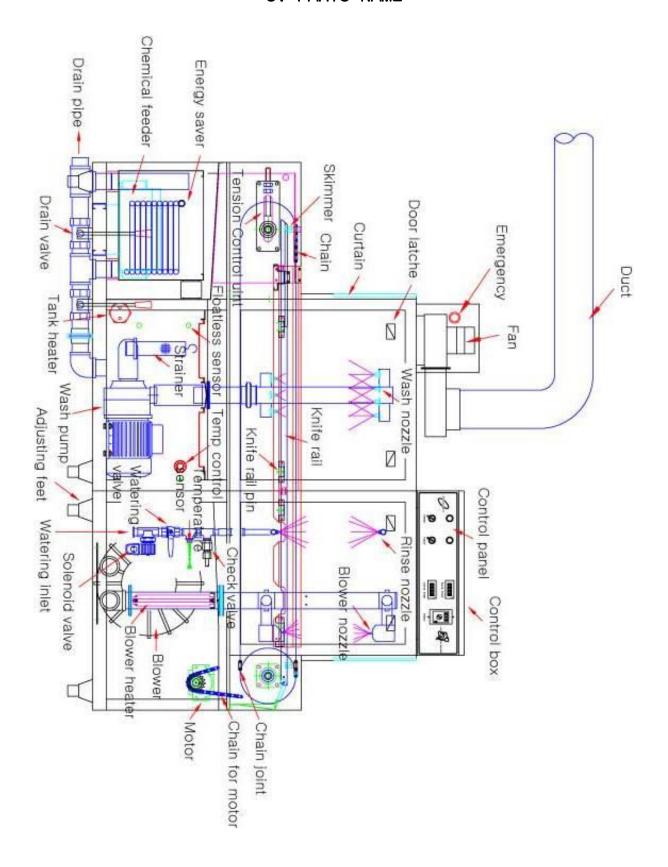

DRAINING CONN.-PIPE: 50A OVER AT BOTTOM OF THE M/C

VENTILATION -NO NEEDED HOOD [CONNECT Ø 150 DUCT PIPE TO M/C INLET]

### 2. Usage

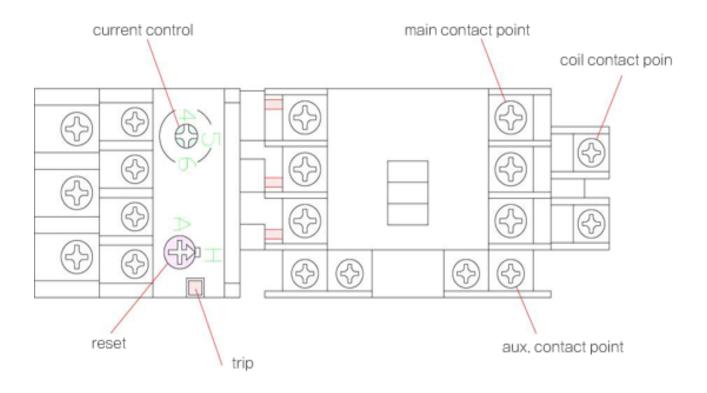

- 1) Pre-check for operation
  - The contract of the contract o
  - © Remove the food stuffs on the strainer
  - © Remove the debris on the nozzles of wash and rinse
  - © Clean the wash tank
- 2) Notice on operation
  - never stack dishes one on top of another on the belt
  - © Don't put the others except for dishes
- 3) Preparation for wash
  - Tasten the drain valve
  - © Check no damage on the main electrical cable
  - © Open all watering valves
  - © Turn on the switch [Check red lamp ON and green lamp ON if finished watering
- 4) Wash
  - ¬ Don't operate till wash temperature, 60°C
    - □ Turn on start switch
    - © Check pump working and its noise
    - © Check conveyor and emergency switch
    - Check Rinse and Detergent
    - ⊎ Don't stack the dishes for free access to all sides of each dish
    - Without stack and sort system, a user should receive the dishes in hand
    - © Turn start switch off while not operation, temporarily
- 5) Check after operation
  - ① Check no dishes inside of dishwasher
  - □ Turn off the power switch if fished up the work
  - © Unfasten drain valve for draining
  - Take food stuffs off out of strainer
  - Clean the inside of dishwasher
  - □ Close all valves

## 3. PARTS NAME

### 4. Electrical parts

#### 1) Contactor

Tripper: Automatically power-off device to protect the motor from overload current

- Trip up by 2-3mm during over current
- $\ensuremath{\bigcirc}$  Push the trip button but for a damage after checking the motor

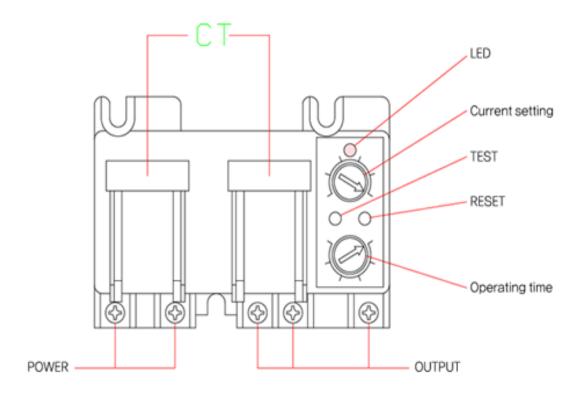

Current control Device: Current control device suitable for the current value

Reset: Setting trip mode in automatic or manual 

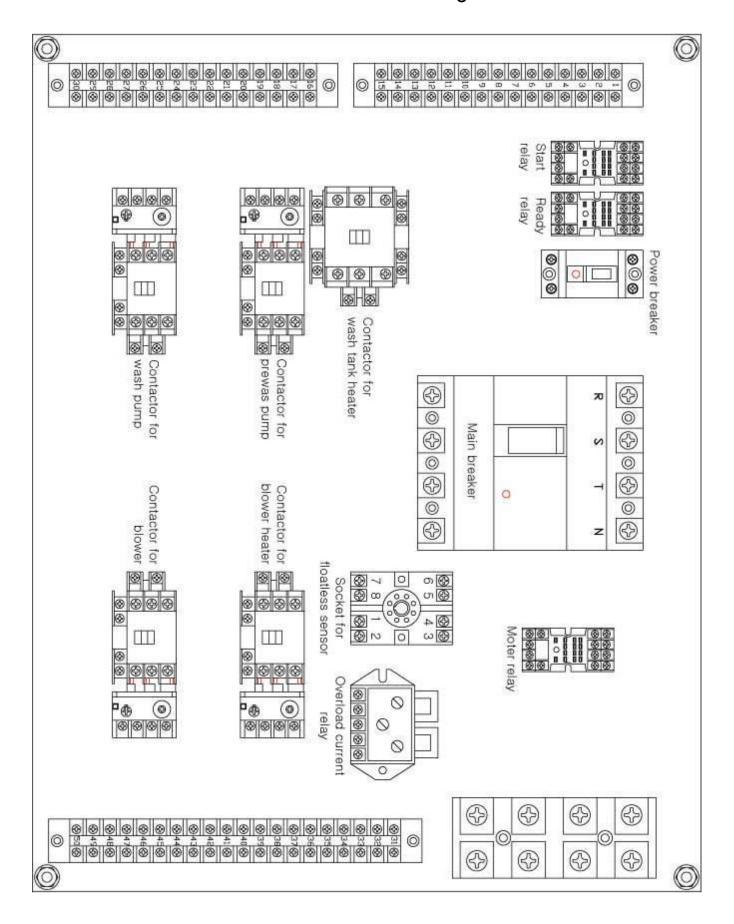

Manual reset: H position [button up-basic mode]

O Automatic reset: A position

## 2) Earth Leakage Circuit Breaker

### 5. Trouble Shooting

- 1) If the system does not work?
- © Check the main breaker-ON in the control box.
- © Check the ELB ON in the operation breaker.
- O Check the power lamp-ON at Power s/w ON.
- O Check the Ready lamp ON.
- © Check the Main Electric power 380V (in case of 3 Phase 4 wired)
- O Check the operating power 220V.

#### 2) If not watering

- O Check the power s/w lamp
- O Check the watering valve open
- O Check the 380V on No. 44 & 45 of terminal bloc
- O Check the watering (solenoid) valve
- O Check power on No. 5 & 6 of floatless sensor
- © Check the lamp off after clean the sensor if floatless sensor lamp on.

#### 3) If not quit watering

- © Clean the floatless sensor (Refer to page 5)
- O Clean the solenoid valve
- O Check the floatless sensor lamp on

#### 4) If prewash not good

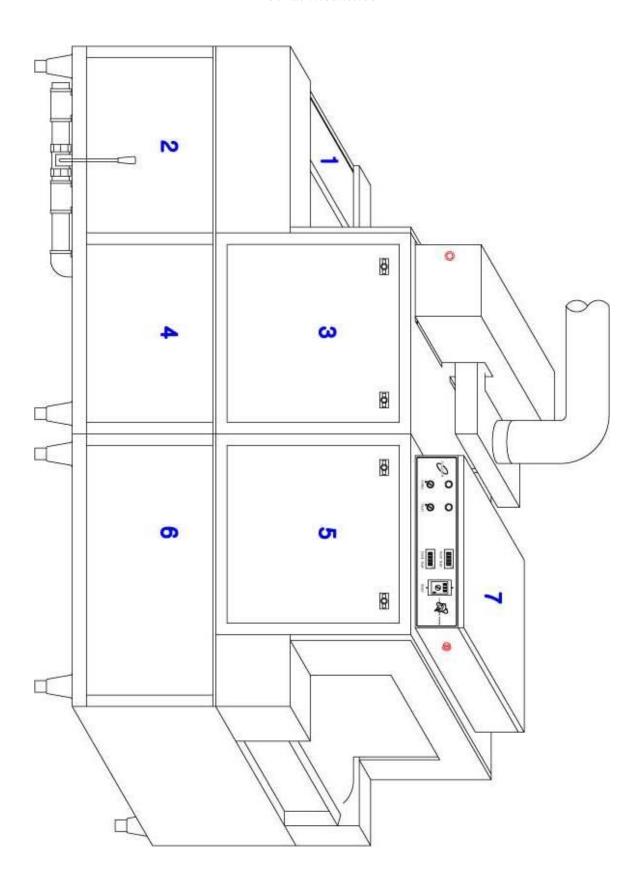

- © Clean the dregs off on the prewash nozzle
- O Check the tripper up on the prewash contactor
- O Clean the dregs off in the prewash pump
- O Check the leakage and coil short of prewash pump
- O Push the tripper of wash pump
- © Check 220V on the prewash contactor by voltage tester

#### 5) If dish is not clean after wash

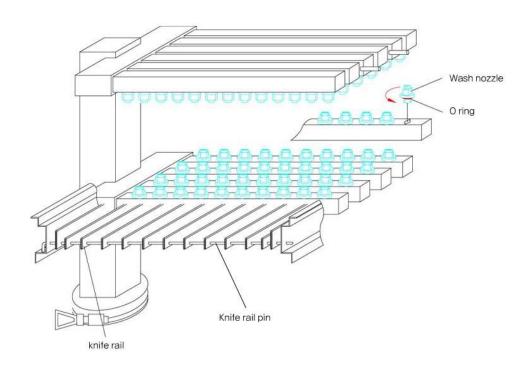

- © Remove dregs at the wash nozzle (Refer to page 22)
- © Check the tripper up on wash contactor (Refer to page 14)
- O Remove the dregs in wash pump
- O Check the leakage and short of wash pump
- O Push the tripper after check wash pump
- © Check 380V on wash pump contactor by voltage tester
- © Check the water is full in wash tank, otherwise fill up the water into the wash tank after its leakage.
- © Check the wash temperature, 55°C ~65°C
- © Check the chemical agent feeding, automatically
- O If lower temperature, check the temperature controller and contactor

- 6) If rinse is not good
  - © Check if the water pressure, 1.2Kg/cm² over
  - O Clean dregs on the rinse nozzle
  - © Check rinse temperature, 82℃
- 7) If dry is not good
  - © Check the tripper up on the blower contactor (Refer to page 14)
  - O Check the blower motor
  - © Check 380V at blower contactor by voltage tester
  - O Check the circuit breaker on of blower heater
  - © Check the tripper up on the blower heater contactor (Refer to page 14)
  - O Push the tripper down after checking blower heater.
  - O Check 220V in blower heater contactor
  - O Check the hot wind out of blower heater nozzle
- 8) If conveyor chain does not work
  - O Check emergency s/w on
  - O Check the display of chain speed
  - O Check the chain speed control on
  - © Check the current control overload relay (Refer to page 15)
  - O Check relay lamp of motor
  - O Check the chain (Refer to page 5)
  - O Check the sprocket and its key of motor
- 9) If emergency does not work
  - O Check emergency s/w
  - O Check the current control overload relay
  - O Check the lamp of motor relay
- 10) When out of the chain in the conveyor
  - Disjoint the chain after power off Immediately
  - If loosen chain, fasten it with tension control nut (Refer to page 13)
- 11) If out of order at steam booster
  - O Check the pressure gauge for the proper pressure
  - O Clean the solenoid valve after disassemble it
  - O Check solenoid valve operation
- 12) If out of order at gas booster
  - O Check gas supply
  - © Check the gas, high or low pressure? (Preferred low pressure in case of LPG)
  - O Check the inlet & outlet valve of gas booster

## 6. Maintenance

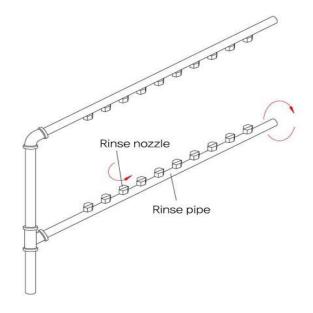

#### 1) Removal of the dregs on wash nozzle

- ① open #3 door (Refer to page 11)»
- 2 Pull the pin out of the knife rail
- 3 Take up the knife rail
- 4 Loosen the nozzle and remove the dregs
- ★ Be sure to watch 0 ring in the wash nozzles

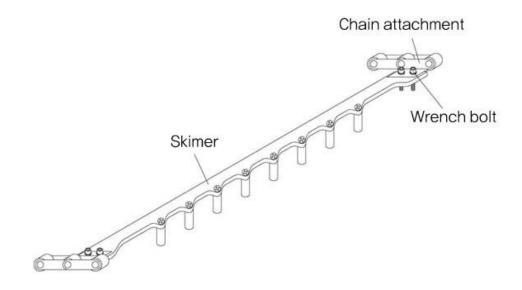

## 2) Dregs removal of rinse nozzle

- ① Open the door No.5 [Refer to page 11] »
- 2 Loosen the rinse pipes at both sides as shown on the above

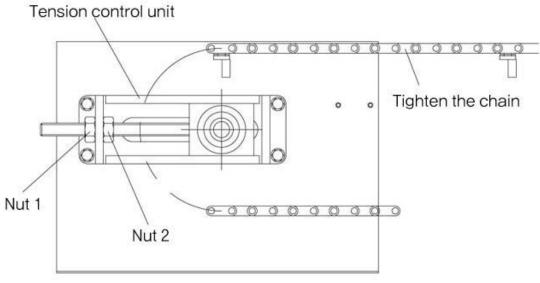

- 3 Remove the dregs after loosening the above
- 4 Assemble the rinse nozzle in reverse order

#### 3) How to exchange skimmers

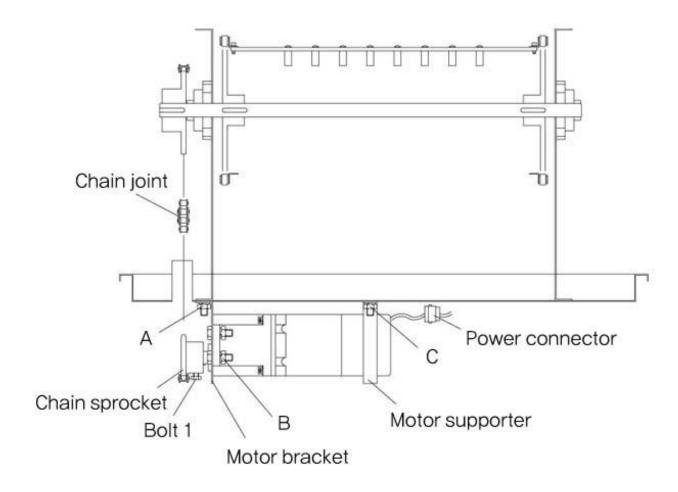

- ① Disassemble the entrance cover No.1 [Refer to Page 11]»
- 2 Pull the skimmer to be replaced toward the entrance
- 3 Loosen the wrench bolt and spring washer on chain attachment
- 4 Assemble new skimmer after replacement Tighten the chain, loosed fastening Nut 1

#### 4) How to control the tension of chain

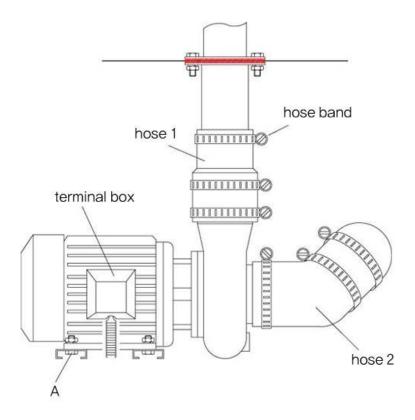

- ① Disassemble the entrance cover No.1 [Refer to Page 11]
- 2 Pull the skimmer toward the entrance
- 3 Tighten the chain, fastening Nut 1

- 4 Fasten Nut 2
- 5 Fasten the bolt after covering it
- 5) How to replace the motors

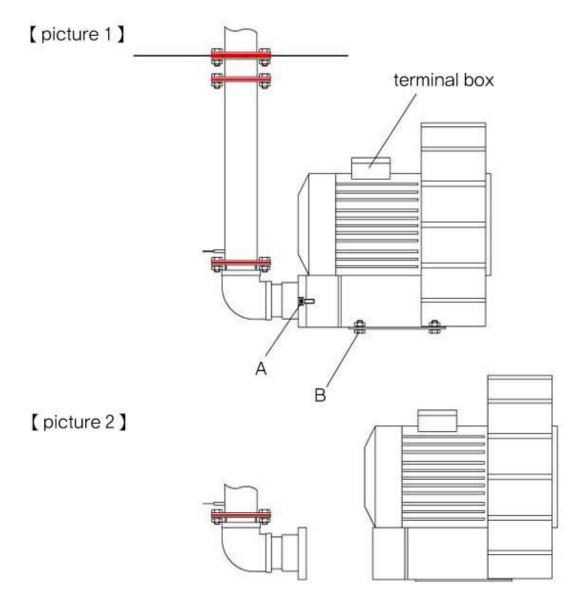

- ① Open No. 7, control box [Refer to page 11] and power off [Refer to page 5]
- ② Open No. 6, door [Refer to page 11]
- 3 Disconnect the motor
- 4 Loosen A, nut by 5mm and take off motor bracket and then disassemble the chain joint
- ⑤ Take off the motor after loosening B (8mm bolt & nut) and C (8mm nut)
- 6 Loosen bolt 1 and take off the chain bracket and then assemble new motor on motor bracket
- Assemble the chain joint
- 8 After tightening the chain, fasten A, nut

## 6) How to replace wash pumps

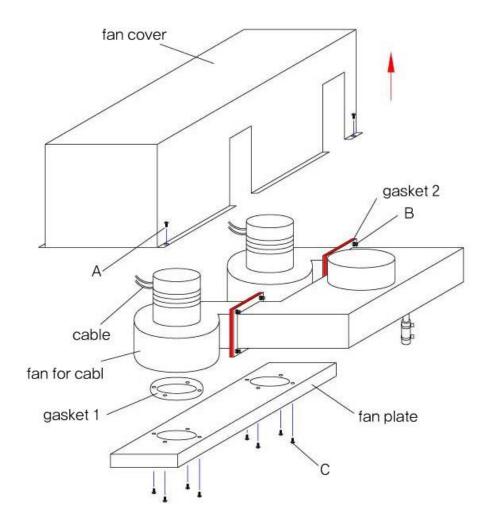

- ① Open No. 7, control box [Refer to page 11] and power off [Refer to page 9]»
- ② Open No. 4(cover) [Refer page 11]»
- ③ Disconnect the cable after opening terminal box [Be sure to confirm the cable colors]
- 4 Loosen the hose band
- 5 Loosen A, bolt and nut (8mm 2pcs]
- 6 Put hose 1 upward
- 7 Disassemble wash pump and hose 2, pulling them toward
- 8 Install new wash pump in reverse order

### 7) How to replace ring blower

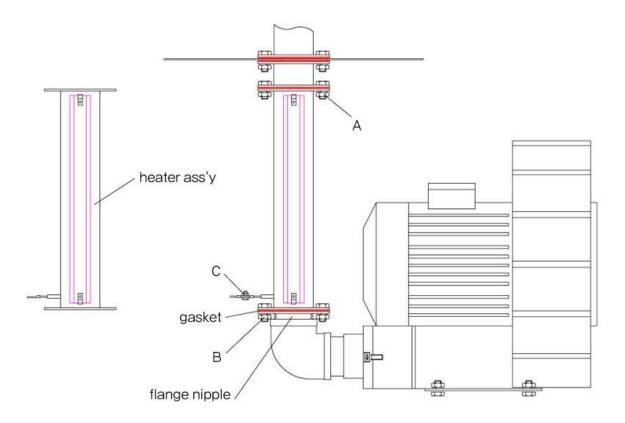

- ① Open No. 7 (control box) [Refer to page 11] and power off [Refer to page 5]
- ② Open No. 6 [Refer to page 11]
- ③ Open terminal box and disconnect the cable [Be sure to confirm the cable colors]
- 4 Loosen A, wrench bolt (8mm 2pcs)
- ⑤ Disassemble B, bolt and nuts (8mm, 4pcs)
- 6 Refer to the picture 2
- ? Assemble the new blower like picture 1

#### 8) How to replace fans

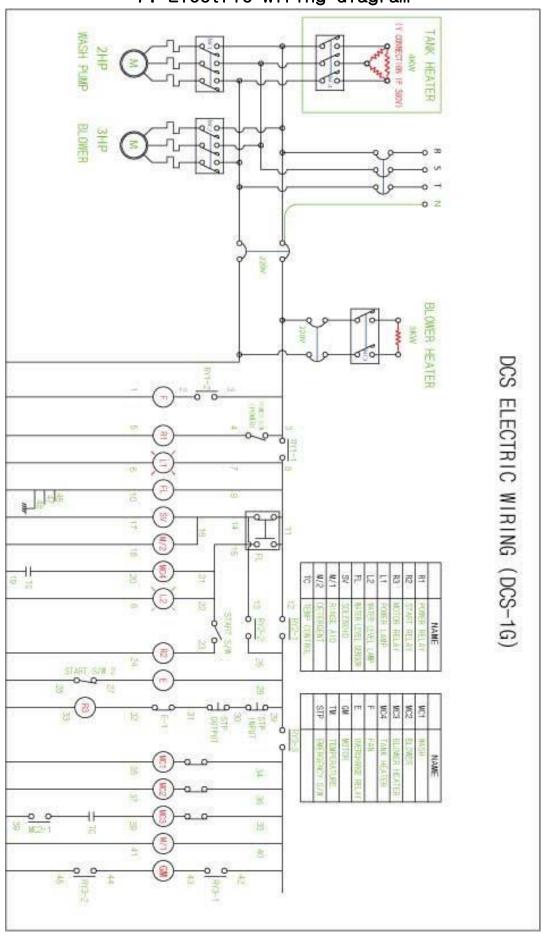

- ① Open No. 7 (control box) [Refer to page 11] and power off [Refer to page 5]»
- 2 Loosen A, bolt take off the fan cover
- 3 Loosen fan B, bolt and nut (4mm, 4pcs)
- 4 Loosen C, tapping screw
- 5 Disconnect the cable out of fan
- 6 Remove the fan
- 7 Equip new fan
- \* After plating silicon on both gasket 1 & 2, assemble it.

## 9) How to exchange blower heater Ass'y

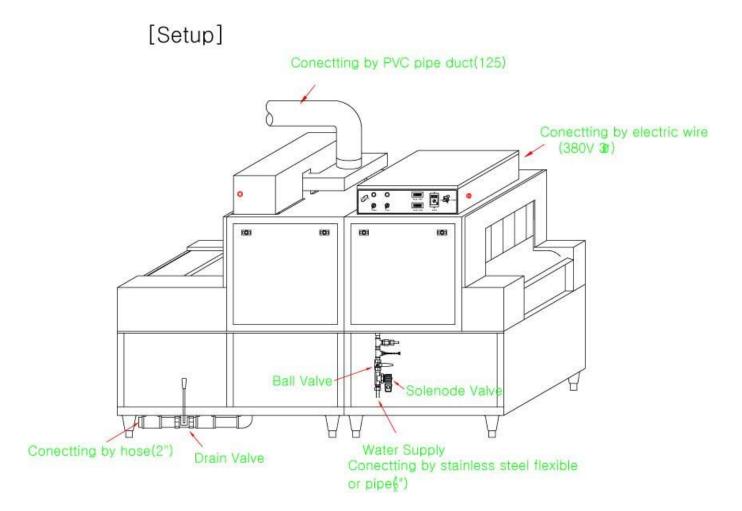

- ① Open No. 7 (control box) [Refer to page 11] and power off [Refer to page 5]
- ② Open No. 6 (cover) [Refer to page 11]
- 3 Loosen A, bolt and nut (8mm, 4pcs)
- 4 Loosen B, blot and nut (8mm, 4pcs)
- 5 Disconnect C, heater terminal
- 6 Disassemble heater ass'y like the left

## 7. Electric wiring diagram

#### 8. Dishwasher Installation

#### 1) Instruction before installation

- O Confirm the place to be installed
- © Confirm the electric specifications [380V, 3ph, 4wired]
- © Confirm watering pressure, over 1.2kg/cm²
- O Confirm the ventilation
- O Position the drainage

#### 2) How to install the dishwasher

- Level the dishwasher in using C. adjusting feet
- O Connect the cable to terminal bloc in order
- © Be sure to confirm the elec. spec's, 380V, 3Ph, 4wired
- © Connect the hose for rinse to check valve [Refer to page 5]

#### \* Watering for initial operation

- 1. Open panel No.6 at page 11 on this manual Connect the watering hose [1/2" stainless flexible hose] to solenoid valve
- 2. Open the ball valve [Available to throttle watering volume by this valve]
- 3. Power On at control box No. 7 at page 11
- 4. Check the watering out of rinse nozzle after opening panel No. 5 at page 11

[It takes 20 minutes to fill up the tank]

- 5. Check the start lamp (green color) at control box No. 7 at page11 If green lamp on, the tank is full and the M/C ready to start
- 6. Turn on the start switch at control box No. 7 at Page 11.
